South Africa

PROFESSIONAL SUMMARY

- Backend-focused Software Developer specializing in Django-based production systems for engineering and workflow-intensive environments. Sole architect and operator of revenue-supporting platforms that replace manual spreadsheet-driven processes with structured, automated, and version-controlled systems. Strong emphasis on system design clarity, auditability, and long-term maintainability.

EDUCATION

- **North-West University** South Africa
Bachelor of Science in Information Technology (with distinction) Feb 2023 – Dec 2025
- **Sasolburg High School** South Africa
National Senior Certificate (Matric) Jan 2018 – Dec 2022

EXPERIENCE

- **Holt Consulting Engineers (Pty) Ltd** Remote / Hybrid
Software Developer (Contract, Sole Developer) Dec 2024 – Present
 - Sole architect, developer, and production operator of multiple Django-based systems used daily by 10–15 engineering and administrative staff.
 - Improved existing quotation and technical documentation workflows by replacing manual spreadsheet-based processes with structured CRM and work-order systems, standardizing document generation and reducing turnaround time from tens of minutes or hours to seconds.
 - Designed and implemented modular monolith architectures (Django 5/6 + PostgreSQL) managing 150+ customer records with structured numbering schemes, immutable versioned documents, and traceable approval workflows.
 - Built engineering calculation modules using NumPy/SciPy (curve interpolation and density-corrected performance calculations) to automate fan-selection logic and technical datasheet generation.
 - Implemented custom user models with granular role-based access control and field-level audit logging (user/IP + change diffs) to strengthen governance and operational transparency.
 - Developed automated LaTeX and WeasyPrint document pipelines generating production-ready quotations, works orders, and technical datasheets directly from validated system data.
 - Modernized frontend architecture using HTMX and Alpine.js; incrementally integrated Tailwind into legacy Bootstrap layouts without requiring full frontend rewrites.
 - Managed Dockerized production deployments on DigitalOcean with Nginx reverse proxy and WireGuard VPN; implemented scheduled PostgreSQL backups via cron to DigitalOcean Spaces for data resilience; handled schema migrations, production updates, and operational incidents.
 - Established automated testing with 100+ pytest cases covering CRM, quotation, and calculation flows to safeguard core business logic.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, SQL
- **Backend:** Django, PostgreSQL
- **Frontend:** HTMX, Alpine.js, Tailwind CSS, Bootstrap
- **Testing:** pytest
- **Infrastructure:** Docker, DigitalOcean, DigitalOcean Spaces, Nginx, WireGuard, Linux
